

## The Tenderfoot Farmer

It was one of these experimental farmers, who put green spectacles on his cow and fed her shavings. His theory was that it didn't matter what the cow ate so long as she was fed. The questions of digestion and nourishment had not entered into his calculations.

It's only a "tenderfoot" farmer that would try such an experiment with a cow. But many a farmer feeds himself regardless of digestion and nutrition. He might almost as well eat shavings for all the good he gets out of his food. The result is that the stomach grows "weak" the action of the organs of digestion and nutrition are impaired and the man suffers the miseries of dyspepsia and the agonies of nervousness.

To strengthen the stomach, restore the activity of the organs of digestion and nutrition and brace up the nerves, use Dr. Pierce's Golden Medical Discovery. It is an unfailing remedy, and has the confidence of physicians as well as the praise of thousands healed by its use.

In the strictest sense "Golden Medical Discovery" is a temperance medicine. It contains neither intoxicants nor narcotics, and is as free from alcohol as from opium, cocaine and other dangerous drugs. All ingredients printed on its outside wrapper.

Don't let a dealer delude you for his own profit. There is no medicine for stomach, liver and blood "just as good" as "Golden Medical Discovery."

Call and Get My Price On

**Flour, Sugar, Coffee.**

and any thing else you may want in the grocery line--We carry a nice line of FRUIT and CANDY. FRESH VEGETABLES of all kinds received daily.

Tyndall's Tribute to Faraday.

Tyndall, in paying tribute to the illustrious Michael Faraday, has this to say: "His nature was impulsive, but there was a force behind the impulse which did not permit it to retreat. In his warm moments he formed a resolution, in his cool moments he made that resolution good. Thus his fire was that of a solid combustible, not that of gas which blazes suddenly and dies as suddenly away."

## Farm and Garden

### VENISON FOR PROFIT.

Government Officials Think Farmers Could Rear Deer Successfully.

In "Deer Farming in the United States," a bulletin issued by the department of agriculture, the economic possibilities of raising deer and elk in the United States are discussed. It is believed that when the restrictions now imposed by state laws are removed, says the bulletin, this business may be made an important and highly profitable industry, especially since it will be the means of utilizing much otherwise unproductive land. The raising of venison should be and is naturally as legitimate a business as the growing of beef or mutton, and state laws should be so modified as to permit the producer who has stocked a preserve with deer at private expense to dispose of his product at any time under reasonable regulations either for breeding purposes or for food.

The growing scarcity of game mammals and birds in the United States and the threatened extinction of some of them over large parts of their present ranges make the preservation of the remnant highly important. Very important also is the increase of this remnant so as to make game more abundant. It is believed that by means of intelligent game propagation both by the states and by private enterprise many of our depleted ranges can be restocked with big game.

Wherever obtainable in quantity the flesh of deer of different kinds has always been a staple article of diet, and under different market conditions it is hardly necessary to say that venison is perhaps the most important game, being a favorite with epicures and also having a wide use as a substitute for beef and mutton, which meats it resembles in texture, color and general characteristics. Its flavor is distinctive, though it suggests mutton rather than beef. In chemical composition it is very similar to beef, though, judging from available data, it is not so fat as stall fed cattle. The following figures show how it compares with beef and mutton: A lean venison roast before cooking has been found to contain on an average 75 per cent of water, 20 per cent of protein or nitrogenous material and 2 per cent of fat; a lean beef rump, some 65 to 70 per cent of water, 20 to 23 per cent of protein and 5 to

ROCKY MOUNTAIN ELK.

14 per cent of fat, and a lean leg of mutton, 67 per cent of water, 19 per cent of protein and 13 per cent of fat.

Venison, beef and other common meats are very thoroughly digested whatever the method of cooking. Venison may be roasted, broiled, pan broiled or used for making stews in much the same way as beef. It should be eaten as soon as possible.

The general popularity of venison is so great and the demand for it so widespread that overproduction is improbable. The other products of the deer—skins and horns—are of considerable importance, and in countries where deer are abundant and especially where large herds are kept in semidomestication the commerce in both is very extensive.

A number of species of the deer family have been proved to be susceptible to domestication. The reindeer, however, is the only one that has been brought fully under the control of man. The fact that the European red deer and the fallow deer have been bred in parks for centuries without domestication does not prove that they are less susceptible to the process than the reindeer. The purposes for which they have been held captive and the environment given them have been markedly different. It must be remembered also that few attempts have been made to rear and domesticate deer under intelligent management. The work has been largely a matter of chance experiment. If they had been as long under careful management as cattle they would now probably be equally plastic.

But raising deer for profit does not necessarily imply their complete domestication. They may be kept in large preserves with surroundings as nearly natural as possible and their domestication entirely ignored. Thus the breeder may reap nearly all the profit that could be expected from a domestic herd, while the animals escape most of the dangers incident to close captivity. But the breeder who aims at the ultimate domestication of the animals and whose herd approaches nearest to true domesticity will in the end be most successful.

## Treating The Wrong Disease

Many times women call on their family physicians, suffering, as they imagine, one from dyspepsia, another from heart disease, another from liver or kidney disease, another from nervous prostration, another with pain here and there, and in this way they present alike to themselves and their easy-going or over-busy doctor, separate diseases, for which he, assuming them to be such, prescribes his pills and potions. In reality they are all only symptoms caused by some weakness or derangement of the organs distinctly feminine. The physician, ignorant of the cause of suffering, keeps up his treatment until large bills are made. The suffering patient gets no better by reason of the wrong treatment, but probably worse. A proper medicine like Dr. Pierce's Favorite Prescription, directed to the cause would have entirely removed the disease, thereby dispelling all those distressing symptoms, and instituting comfort instead of prolonged misery. It has been well said, that "a disease known is half cured."

Dr. Pierce's Favorite Prescription is a scientific medicine, carefully devised by an experienced and skillful physician, and adapted to woman's delicate system.

It is made of native American medicinal roots without the use of alcohol and is perfectly harmless in its effects in any condition of the female system.

As a powerful, invigorating tonic "Favorite Prescription" imparts strength to the whole system and to the organs distinctly feminine in particular. For overworked, "worn-out," "run-down," debilitated teachers, milliners, dressmakers, seamstresses, "shop-girls," house-keepers, nursing mothers, and feeble women generally, Dr. Pierce's Favorite Prescription is the greatest earthly boon, being unequalled as an appetizing cordial and restorative tonic.

As a soothing and strengthening nerv-

ine "Favorite Prescription" is unequalled and is invaluable in allaying and subduing nervous excitability, irritability, nervous exhaustion, nervous prostration, neuralgia, hysteria, spasms, St. Vitus's dance, and other distressing, nervous symptoms commonly attendant upon functional and organic disease of the distinctly feminine organs. It induces refreshing sleep and relieves mental anxiety and despondency.

Dr. Pierce's Pleasant Pellets invigorate the stomach, liver and bowels. One to three a dose. Easy to take as candy.

EVERY WOMAN ought to possess Dr. Pierce's great book, the People's Common Sense Medical Adviser, a magnificent thousand-page illustrated volume. It teaches mothers how to care for their children and themselves. It is the best doctor to have in the house in case of emergency. Over half a million copies were sold at \$1.50 each, but one free copy in paper-covers will be sent on receipt of 21 one-cent stamps to pay the cost of mailing only; or send 31 stamps for a handsome cloth-bound copy. Address the publishers, World's Dispensary Medical Association, 663 Main St., Buffalo, N. Y.

### Homeseekers'

Excursion fares to points in Colorado, Idaho, Kansas, Michigan, Missouri, Montana, Nebraska, Nevada, Utah, North Dakota, South Dakota, Wisconsin, Arizona, Texas, Oklahoma, Arkansas, Louisiana, Mexico, New Mexico, Wyoming. The Illinois Central will sell round-trip homeseekers excursion tickets to points in the above named states every first and 3rd Tuesday at very reasonably reduced rates. For further information call on, write or phone ticket agent Illinois Central, Cumb. 45-2.

T. L. Morrow, Agent.

### Summer Tourist Fares.

The Illinois Central will sell round trip summer tourist tickets from May 15th, 1910, to September 20th, 1910, at reduced rates to points in the states of Alabama, Arizona, Arkansas, Canada, Colorado, Connecticut, District of Columbia, Florida, Georgia, Idaho, Illinois, Indiana, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Mexico, Michigan, Minnesota, Mississippi, Missouri, New Hampshire, New Jersey, New Mexico, New York, North Carolina, Ohio, Oregon, Pennsylvania, Rhode Island, South Carolina, South Dakota, Tennessee, Utah, Vermont, Virginia, West Virginia, Wisconsin and Wyoming.
